Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Drawings

This application lacks formal drawings. The informal drawings filed in this application are acceptable for examination purposes. When the application is allowed, applicant will be required to submit new formal drawings.

Specification

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

The abstract of the disclosure is objected to because it cites a pericardial procedure while the claimed method makes no mention of the pericardium. Correction is required. See MPEP § 608.01(b).

The disclosure is objected to because of the following informalities:

The word arrhythmia is misspelled throughout the disclosure

On page 3, line 15 there is a typographical error (tot he).

On page 3, line 19, reference is made to sheath 2. There is no label 2 in the drawings.

On Page 3, lines 21 and 22, both the electrode and area are labeled 22.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent 6,164,283 to Lesh. Lesh discloses a method for forming a cardiac ablation using a catheter with an RF electrode element (Col. 22, line 60) wherein an expandable member (Fig. 9D, #470) provides at least a portion of an anchor (fixing) for a first end of a linear ablation member (Fig. 9D, # 460). The catheter shape is adapted to push the second end (ablation electrodes) to

substantially contact the atrial wall (Col. 18, lines 24-35). Cardiac catheters are inherently flexible to enable them to reach the target area. It is implicit that the ablation would be done following proper positioning of the electrodes.

Conclusion

It is brought to the applicant's attention, that the disclosure consistently mentions the ablation procedure being performed within the pericardial space. The claim has no limitation as to the area of the heart being ablated.
